

CATHODIC PROTECTION

A cost-effective corrosion control system

CATHODIC PROTECTION

Why You Need Cathodic Protection

Corrosion can destroy the integrity of your infrastructure. Patching the damaged area may seem the simplest and least expensive process of repair, but it may also be the least effective. Eventually, repairs may be required on a cyclical basis—each time growing more expensive. These repairs weaken the structure and may lead to the need for total replacement of your infrastructure.

Corrpro engineers understand the principles of corrosion and can provide you with a cost-effective corrosion control system designed to protect your infrastructure. Corrpro can prevent corrosion in new structures and mitigate corrosion to existing structures to save you money.

Corrpro employs hundreds of cathodic protection engineers and construction personnel. We offer comprehensive system analysis, upgrade designs and installation services using advanced cathodic protection design tools, materials and construction techniques.

Cathodic Protection

Corrpro is a recognized global leader in the field of cathodic protection and corrosion control. We provide systems and programs which prevent the loss of metal and coatings due to corrosion. Properly designed, installed and maintained cathodic protection systems can effectively save an asset owner hundreds of thousands of dollars in maintenance, repair and recoating costs to submerged/buried steel surface areas throughout the life of the structure.

Corrpro has provided solutions from complete turnkey installations to continuous monitoring and maintenance services for unique corrosion problems in all industries for over fifty years. We have installed systems for industrial, municipal, commercial and government clients throughout the world.

Corrpro complies with AWWA Standard D104 and NACE recommended practices. We offer a full line of superior quality cathodic protection materials.

Corrpro's cathodic protection systems are typically less expensive than replacement and often less than rehabilitation options.

An ISO 9001:2008 Certified Company (U.S.)

A Leading Provider of Cathodic Protection

Corrpro is a leading provider of cathodic protection services, equipment and materials for the world's infrastructure. Designing and installing cathodic protection systems is a core activity for Corrpro. Services, equipment and materials provided by Corrpro include the following:

Cathodic Protection Systems

- Field surveys
- System specifications and designs
- Plans and detail drawings

System Materials and Construction

- Conventional groundbeds
- Deep anode groundbeds
- Distributed anode systems
- Cathodic protection test stations

Interference Control Systems

- Bond stations
- Auxiliary drainage systems
- AC interference mitigation
- DC interference mitigation
- Fault current protection
