WE KNOW

CORROSION

TECHNOLOGY-ENABLED CORROSION PROTECTION

Your assets deliver critical resources that keep businesses, the economy, and our communities running.

Corrpro has the technology, the skills, and the drive to keep your systems safe while protecting the environment from a catastrophic failure.

As the leader in corrosion prevention, our proprietary data management software and expert teams give asset owners real-time systems analysis. Our technology provides accurate data that drives engineering, maintenance, and inspection solutions specific to your system.

Proactive Approach

Our proactive approach helps clients reduce water main failures, identify active corrosion on pipeline, and prioritize pipelines for replacement or rehabilitation. Through this process, Corrpro's solutions extend the life of the pipelines by improving the overall health of the pipeline infrastructure and helping to manage and protect the owner's assets. This approach not only saves money, but also protects the environment and keeps customers and regulatory agencies satisfied.

Corrpro Solutions

Corrpro's services portfolio offer a comprehensive evaluation to determine the best fit solution for your project:

- Data Collection & Soil Analysis
- Corrosion & Condition Assessment
- Cathodic Protection Design & Installation
- Maintenance & Monitoring

Why Corrpro?

Corrpro has been recommending technologies to extend the life of new and existing pipelines for more than 40 years with our team of industry-leading experts. With the installation of proper coatings, cathodic protection, proper maintenance and focused inspection, water systems can experience reduced corrosion activity and degradation, keeping infrastructure working better, safer and longer for years to come.
